

CEILING CLADDING

Ceiling cladding System

GammaStone Air panels fit the ceilings perfectly. They can be the ideal solution for architects, designers and interior designers, to be customised according to the creative, each project's technical and aesthetic specifications. The ceiling covering system can count on a lightweight and safe fixing mechanism, on high stability of the ceiling even in areas characterised by a significant seismic risk. The decorative opportunities of our coverings, moreover, fit perfectly to every style and any type of environment.
