

FIN SYSTEM

Fins and Vertical Screens

GammaStone offers cutting-edge solutions for the creation of sunshades, fins, and vertical screens, combining innovative design with excellent performance. The large-format lightweight panels, designed for cantilevered installations, provide a distinctive monolithic effect thanks to a fully integrated prefabricated structure.

These panels are characterized by exceptional lightness, resulting from advanced technologies that reduce the load on the façade without compromising strength and durability. The minimum thickness of 10 cm, combined with a sophisticated internal structure, ensures a monolithic aesthetic even on the exterior, lending a modern and impeccable touch to every architectural project.

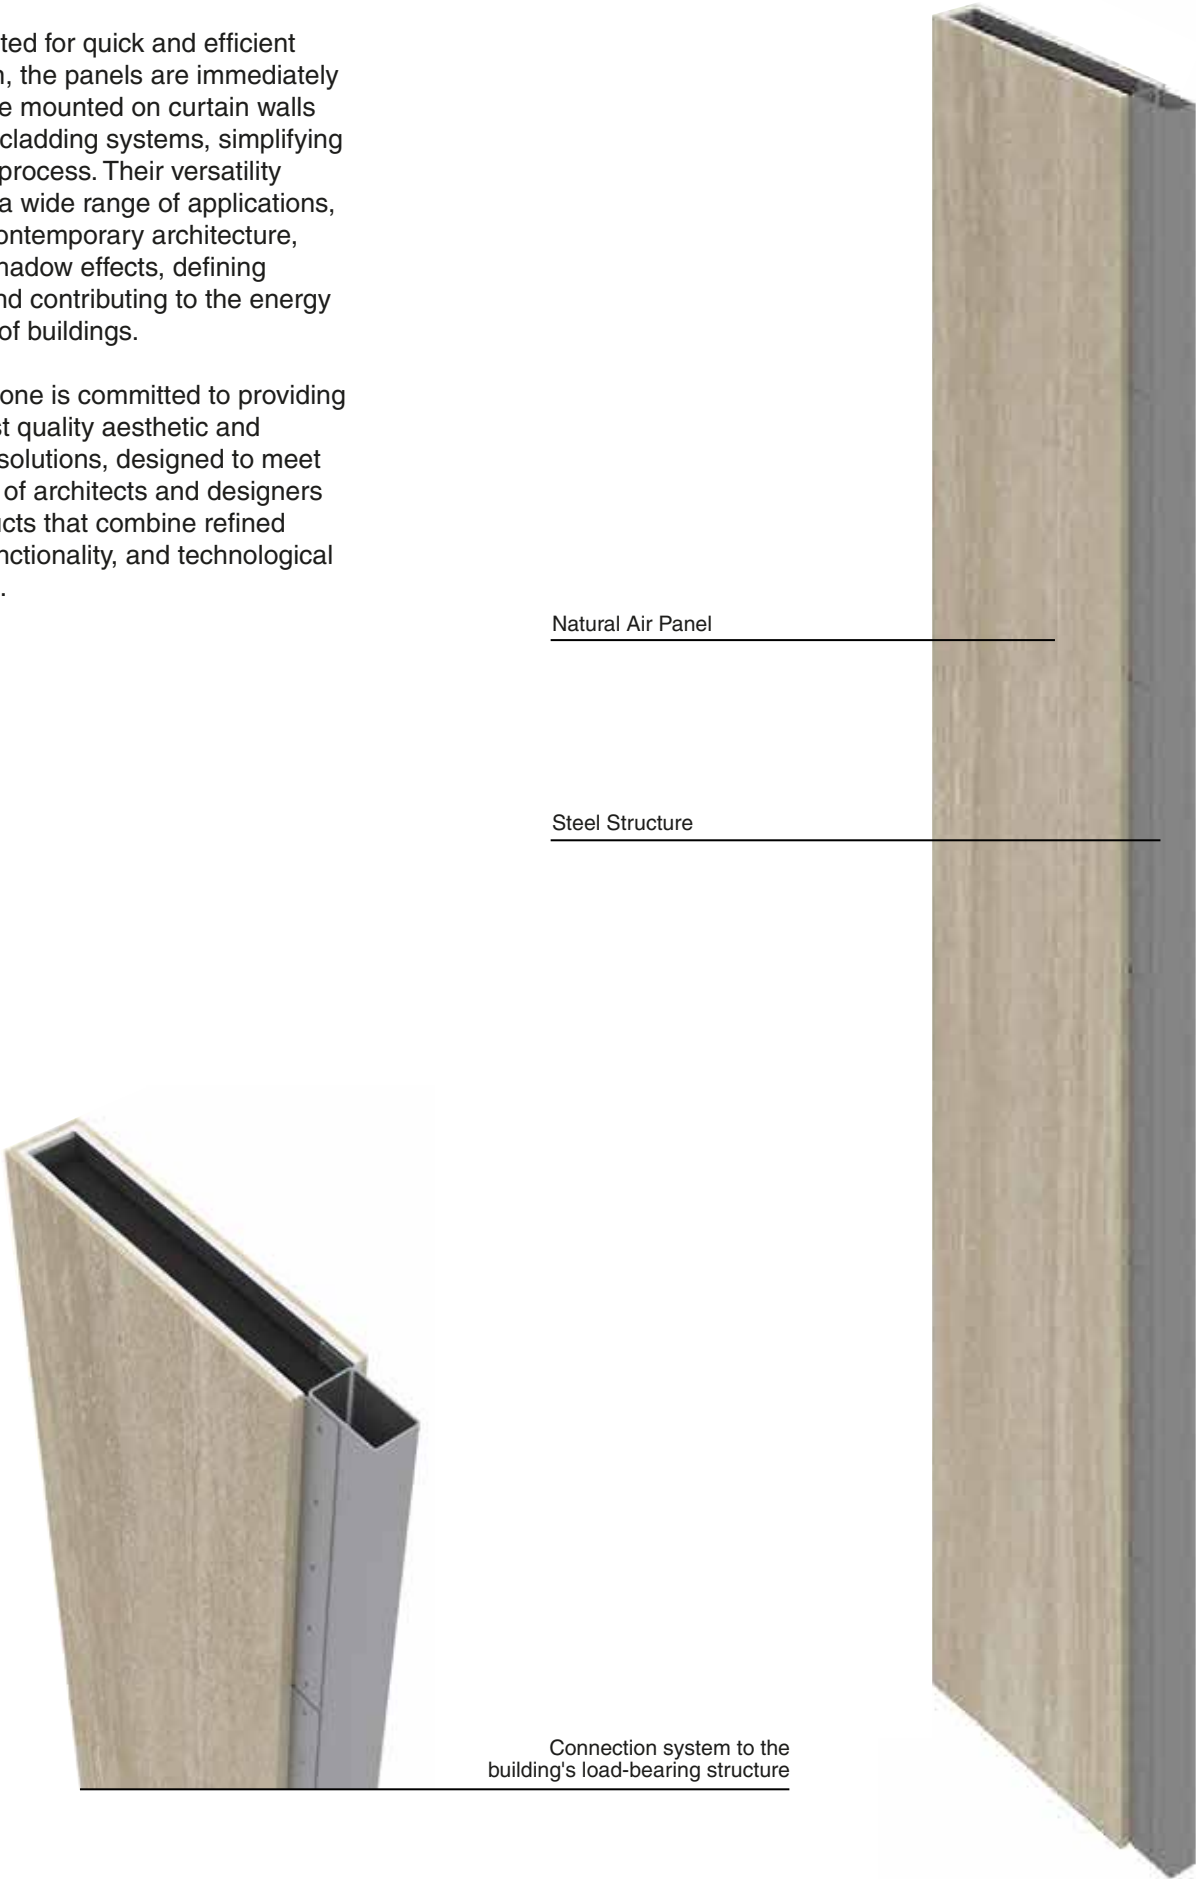

Prefabricated for quick and efficient installation, the panels are immediately ready to be mounted on curtain walls and other cladding systems, simplifying the entire process. Their versatility allows for a wide range of applications, ideal for contemporary architecture, creating shadow effects, defining spaces, and contributing to the energy efficiency of buildings.

GammaStone is committed to providing the highest quality aesthetic and structural solutions, designed to meet the needs of architects and designers with products that combine refined design, functionality, and technological innovation.
